

THERMOTRON®

NEW PRODUCT HIGHLIGHT: SE-1504

WHAT WAS SOLD?

SE-1504-6-6

The customer required a wide workspace. The SE-1504 utilizes a standard SE-style condenser system and also has a wider workspace (60"W x 40"D x 38-1/4"H [152cm x 102cm x 97cm]) with a bi-parting access door. The conditioner and plenum is side-wall mounted. This SE-1504 has both the standard SE-Series temperature and humidity range: -70°C to +180°C (-94°F to 356°F) with 10% to 98%RH. System performance is largely dependent on the refrigeration system chosen.

WHO ELSE CAN USE THIS?

Applications requiring chamber workspace that is substantially wider than it is deep will benefit from this design. Instead of quoting a large AGREE Chamber, you can quote a lower cost SE-style Chamber. The SE-1504 is easy loading for wide products, such as dashboards, solar panels, wide screen LCDs, appliances, hybrid battery packs for vehicles, etc. We have also learned from past experience that manufacturers of disk drives and data storage devices prefer this wider, shallower form factor to load and test their products. With this ergonomic loading configuration, products are easily placed inside the chamber without extending past arm's length.
